

Mark 978 Series

Sanitary Control Valves - JD Version

The Mark 978-JD (Jorlon Diaphragm) Series is designed to meet the rigid specifications for sterile process and clean utility control valves. This valve series is suitable for a wide variety of applications in the, bio-pharmaceutical, Parenteral, cosmetic, dairy and food and beverage industries.

The Mark 978 meets ASME BPE guidelines, and is ideally suited for a wide range of flowing media in both the clean utility and process areas of sanitary and aseptic systems.

High rangeability, true characterized trim, high capacities, superior temperature and pressure ratings, facilitated by a superior diaphragm, make the MK978 the sanitary control valve for sterile process, buffer, WFI and acid metering, and clean gas and steam services.

Whether the need is to control pressure, temperature, flow, pH, or another variable, the MK978 is the right valve for your process.

FEATURES

- Specialized design of diaphragm seal and components allows ultra-high cycle life and lifetime diaphragm warranty

DIMENSIONS

Installation and Drainability (for both valves):

- Valve can be installed with flow direction as shown above, or reverse
- For gravity drainage from inlet through outlet and no hold up when open, install upright as show above with flow entering the right side.

IMPORTANT:

The 1/2" - 1" MK978E can only be installed as shown above. If installed on it's side (90° from above orientation), it will not gravity drain.

- If you need to install a valve on it's side, order the MK978 (not the MK 978E). Call Steriflow or your Steriflow Representative for the MK978 data sheet, or for model number help.
