

SVC/SHC Series

Sanitary Check Valves

The patented SVC/SHC Series are vertical and horizontal check valves designed specifically for use in biopharmaceutical and parenteral drug manufacturing applications. They are the first check valves to follow the valve design guidelines of ASME BPE 2016. Since no spring, hinge, mechanical return mechanism or stem is used, they are crevice free, have no areas for particle entrapment, minimize particulate shedding, and are CIP and SIP capable, and autoclavable.

The SVC with Teflon, PEEK and 316/EPDM discs are for vertical up flow installations. The NEW SVC with floating Polypropylene disc was specifically designed for vertical downflow process outflow and drain installations, and is another Steriflow industry first. The SHC is designed with any disc for horizontal line installations.

How it Works:

As soon as inlet pressure exceeds the weight of the disc plus the outlet pressure, the disc will lift. Process media flows under the seat and through the disc perimeter holes to the outlet side of the valve. As flow begins to reverse, the differential pressure across the valve drops and the disc returns to the seat, closing the valve.

FEATURES

- NEW! DIN & ISO Tri-Clamp and tube weld ends - standard
- The first and only vertical liquid down flow sanitary check valve that is continuously self draining
- Applicable for gas or liquids, and suitable for CIP and SIP, and are autoclavable
- Elimination of springs or hinges speeds opening time and eliminates particle entrapment areas
- High flow rates with minimal pressure loss compared with mechanical return check valves
- Low particle shedding properties compared with sliding disc type or spring return check valves
- Unique design eliminates dead space and crevices associated with spring check valves

NEW - SVC for vertical liquid down flow installations

- All wetted internal surfaces are mechanically polished and electropolished to SF5, 20 Ra μin (.5 Ra μm), all external surfaces are 40 Ra μin (1 Ra μm), electropolished, other finishes optional
- Sanitary tube weld ends and Tri-clamp ends available
- Positive shutoff without the use of a spring

APPLICATIONS

- **NEW - SVC** for vertical liquid (water based) down flow process and drain lines
- WFI, USP PW: Pump outlet back flow prevention, POU back flow prevention
- Condensate drainage from clean steam distribution loops
- Condensate drainage from process systems using clean steam – fermenters, bioreactors, SIP systems and sterilizers
- Sampling systems in WFI and clean water supply systems
- Air pressure supply systems and pressure rinse systems in pharmaceutical piping
- To replace actuated diaphragm valves on some liquid mixing lines
- Gas (O_2 , N_2 , CDA) sparge, purge or blanket applications
- Vacuum breaker (with filter) on vent line for vessels or equipment

Patent, and Govt Registrations: Patents: US PAT 6,823,893; EU Pat 1319878; Canada: CRN 13987.5

SHC SERIES – FEATURES & BENEFITS

VERTICAL UPFLOW WITH TEFLON, PEEK, OR 316/EPDM DISC

NEW: VERTICAL LIQUID DOWN FLOW WITH FLOATING POLYPROPYLENE DISC

SPECIFICATION

Steriflow Sanitary Check Valve, Model SVC for Vertical installation, Model SHC for Horizontal Installation. Body and end shall be constructed of bar stock material ASTM SA479 316L SF5, with internal wetted surfaces finished to Ra µin (0.5 Ra µm) electropolished or better. Check valve shall use no internal springs or be guided, or slide in the wet (horizontal or vertical) by any means, to prevent particulate generation. Disc shall be constructed of ASTM SA479 316L, or other acceptable material with an EPDM seal, or manufactured out of solid Teflon®, Peek, or Polypropylene. All materials must be FDA and USP <88> Class VI. SVC Vertical liquid down flow check valve shall be continuously drainable with no deadleg. SHC horizontal valves shall be completely drainable with no flat horizontal interior body wetted surfaces. Body sealing methods shall be bolted, or clamped and acceptable by ASME BPE 2016. All gasket materials, o-rings and seals shall be FDA and USP <88> Class VI compliant. Valve body shall be marked as per ASME BPE. Patents: US PAT 6,823,893, EU PAT 1319878

SPECIFICATIONS

Sizes

- SVC: ASME BPE: 1/2" – 3"; DIN: DN15, DN20, DN25, DN40, DN50, DN65, DN80; ISO: DN15, DN20, DN25, DN40, DN50, DN65, DN80
- SHC: 1/2" – 2" (DIN DN15, DN20, DN25, DN40, DN50; ISO DN15, DN20, DN25, DN40, DN50)

End Connections

- ASME Tri-Clamp
- ASME Tube Weld Ends
- DIN/ISO Tri-Clamp Conn's to DIN 32676 Row A or B
- DIN/ISO Tube Weld Ends to DIN 11866 Row A or B

Materials of Construction

- Body: ASME SA479 316L (UNS 31603) is standard. EN 10272:2000 GR 1.4435, AL-6XN®, Hastelloy®C-22 and others are optional.
- Disc: ASTM SA479 316/EPDM, solid Teflon, PEEK, or Polypropylene (All FDA and USP Class VI)
 - * **Note: 2 1/2" and 3" (DN 65, DN80) Disc is not available in 316L/EPDM**
- SHC Body O-Ring: EPDM, Teflon, Silicone, Viton (All FDA and USP Class VI)
- SVC Body Gasket: Silverback®, Tuf-Steel®, TFE/Viton, TFE/EPDM, Viton-600S (All FDA and USP Class VI)

Pressure/Temperature Rating

- Max Pressure: 230 psi @ 100°F (16 bar @ 38°C)
- Max Temperature²: is dependent upon options selected

Applications: Bio or parenteral process, WFI, Clean Gases, Clean Steam², Clean Condensate, CIP Fluids

Opening Pressure

- TFE, PEEK Discs: 0.04 psid (2,76 millibar)
- 316, 316/Elastomer: 0.13 psid (8,96 millibar)
- Polypropylene disc for Vertical Down installation is always open

Surface Finish: Internal wetted parts: ASME BPE SF5 (20 Ra μin (0.5 Ra μm) electropolished); External: 40 Ra μin (1 Ra μm) electropolished standard, 20 Ra and better optional

² Operation above 250°F (121°C) requires Option BC (Bolted Clamp for SVC) refer to Options 9 & 10 in the Ordering Schematic of the SVC on page 4. Maximum Pressure & Temperature is dependent upon gasket, or o-ring options selected. See order grids on page 4 for high temperature ratings at pressure for specific materials.

Note: For a complete ancillary list of all wetted and non-wetted material specifications, please contact Steriflow Valve.

SHC SERIES PHYSICAL DATA

Valve Size	Dimensions (inches)						^{1,2} Leakage* during reverse flow @ 0.3 psi (20,7 mBar) (water, ml/min)	Max Cv	Wt Lbs
	A	B	C	D	E	t			
1/2"	4.00	2.09	0.984	0.375	0.50	0.065	0.6	3.4	3.3
3/4"	4.00	2.09	0.984	0.625	0.75	0.065	0.6	5.1	3.3
1"	4.00	2.09	1.984	0.870	1.00	0.065	1	6.6	3.4
1-1/2"	5.50	2.74	1.984	1.370	1.50	0.065	1	21.8	4.0
2"	6.30	3.25	2.516	1.870	2.00	0.065	0.8	23.1	4.1

¹ Polymer disc (PTFE, PEEK, Polypropylene) reported above

² 316/Elastomer disc leakage less than 0.1 ml/min for all sizes

* Leakage is bubble-tight under same conditions at 30 psi (2,07 bar)

These dimensions apply only to US ASME BPE connections, consult factory for ISO and DIN dimensions
